Drive Large Cost Savings with a Teleran Data Archiving Assessment

Automated Data Usage Analysis Delivers Data Archiving Roadmap with Quantified ROI

TELERAN
DATA ARCHIVING
ASSESSMENT

Assessment tracks and analyses your organization's structured data usage.

It creates an archiving action plan that identifies data to be archived and data that is of no value that should be retired.

The Archiving ROI Calculator uses your actual data usage and storage cost metrics to quantify your archiving project's cost savings and ROI.

BENEFITS

Reduces storage, server and license costs

Lowers data handling expense

Strengthens compliance and reduces risk

Improves application performance

Minimizes database complexity

Data Explosion
Over the past 10 years, organizations have experienced compound annual information growth of more than 40%. Because of this data explosion, CIOs now view archiving unused or dark data as an important tool in controlling data sprawl, lowering storage and handling costs while reducing compliance risks.

Significant Archiving Return on Investment
A recent study by IDC confirms significant savings from archiving projects. The study showed on average:

- $1.8M in savings
- Three year ROI of 489%
- Payback in less than six months
- Improved storage operations staff productivity of 55%

Teleran Data Archiving Assessment
Teleran offers an automated data usage assessment that enables you to generate these kinds of archiving savings and returns. The Teleran Archiving Assessment is conducted by expert Teleran consultants, or Teleran certified services partners, deploying automated archiving assessment software.

The assessment comprehensively and unobtrusively tracks and analyses your organization's data usage and identifies dormant, unused data. It identifies how business users and applications consume data, creating a business context for making effective data storage and archiving decisions.

The Teleran Archiving Assessment is typically a three month process and includes these four steps:

- Workshop Planning Session
- Data Usage Software Agent Installation and Data Collection
- Analysis
- Findings and Recommendations

DELIVERABLES

Comprehensive archiving plan

Fact-based data usage analysis

Quantified cost savings and ROI

Expert archiving consultation and recommendations

TELERAN OVERVIEW

Teleran's Monitoring and Analytics software and services transform applications to new platforms including Big Data and the cloud. Once on the new platforms, Teleran's solutions ensure business performance, compliance and cost efficiency.

For more information about Teleran Archiving Assessment visit Teleran.com or call +1.973.439.1820.
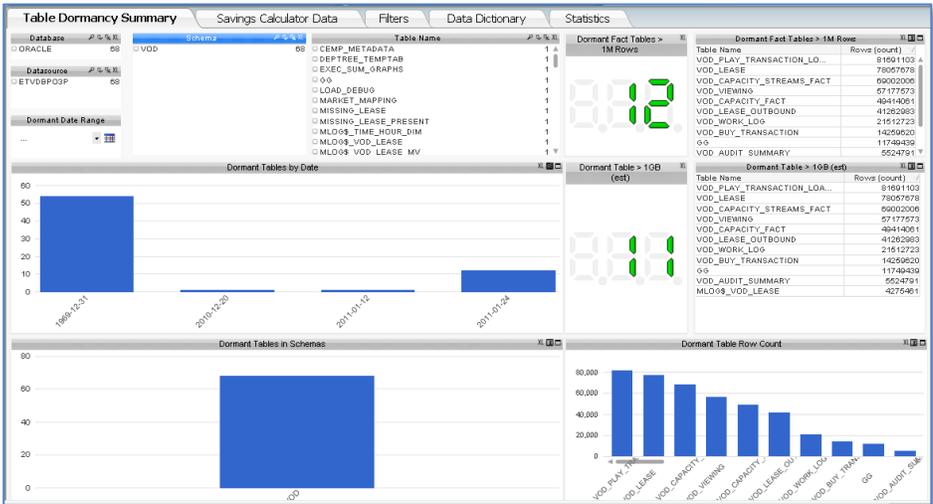

Delivering Your Archiving Project Roadmap and ROI

After completing the automated data usage collection process, Teleran archiving experts deliver an actionable archiving plan based on an in-depth analysis of your organization's unique usage patterns and business applications. The archiving plan identifies the data that should be archived and the data that is of little or no value that should be retired. The Archiving Assessment ROI calculator uses your organization's data usage and storage cost metrics to quantify your archiving project's savings and ROI and compares it to industry averages.

Comprehensive Archiving Assessment Analytics

Your Teleran archiving consultants conduct the assessment using Teleran's automated archiving assessment software. These patented software tools automatically and continuously track and analyze all database usage by key database objects such as schema, table and column and by applications and users. The software creates the fact-based foundation for your archiving plan by identifying all data object sizes, and constructing detailed data object usage, frequency, and dormancy profiles.
