# Cloud Migrations Readiness Assessment

## TELERAN CLOUD-READINESS ASSESSMENT

The Cloud-Readiness Assessment analyzes the "cloud-readiness" of applications and creates a migration roadmap that reduces the time, cost and risk of moving applications to the cloud. With Teleran's Cloud-Readiness Assessment, business and IT executives can commit their applications to the cloud with confidence.

## BENEFITS

Identifies the best applications for the cloud

Speeds cloud migrations

Reduces migration risks and costs

Automated, fast, scalable and accurate process

Delivers successful cloud deployments

Ensures performance and efficiency in the cloud

### *Reducing Time, Cost and Risk of Migrating Database Applications to the Cloud*

While organizations are eager to take advantage of cloud benefits, many are challenged deciding where to start: What applications should be moved to the cloud? How long will it take to get there? And, finally, what will it really cost to migrate to the cloud? Teleran's automated Cloud-Readiness Assessment Service answers these important questions, identifying exactly where and how to get started.

**Identifying Cloud-Ready Applications, Speeding Cloud Migrations**
Teleran's Cloud-Readiness Assessment utilizes Teleran's Cloud Assessment software that analyzes the "cloud-readiness" of applications and creates a migration roadmap that reduces the time, cost and risk of moving applications to the Cloud. Teleran's automated solution replaces manual and time consuming assessment processes. The Teleran Assessment brings scalability, transparency, speed and statistical accuracy to the process.

Teleran's Assessments target database applications. Because these applications are often more complex, dynamic, and unpredictable in their resource use, many organizations do not have a comprehensive understanding of their operating characteristics or business use. Teleran's Assessments bring visibility and clarity to application behavior, user activity and overall usage patterns. Teleran's fact-based and transparent assessment recommendations enable both business and IT management to make sound business decisions about migrating their applications to the Cloud.

**Assessing Application Cloud-Readiness**
Operating as Software as a Service (SaaS), Teleran's automated Cloud-Readiness Assessment solution scores applications on their readiness to take full advantage of cloud benefits. An Assessment uses Teleran's small footprint software agent installed on the network at the customer's site. It typically captures two weeks of application usage metadata and sends it to Teleran's Assessment Software in the cloud where detailed application characteristics and usage metrics across multiple dimensions are analyzed and scored to determine cloud-readiness.

If an application scores high, it is ready to move. If not, Teleran's Assessment specifies what adjustments need to be made to improve an application's score and prepare the application for successful migration and operation in the cloud. With Teleran's Cloud-Readiness Assessment, business and IT executives can commit their cloud-ready applications to the cloud with confidence.

## TELERAN CLOUD-READINESS ASSESSMENT

### DELIVERABLES

**Comprehensive** cloud migration plan

**Fact-based** Cloud-Readiness analysis

**Quantified** reductions in migration costs and time

**Expert** cloud consultation and recommendations

### TELERAN OVERVIEW

Teleran's Monitoring and Analytics software and services transform applications to new platforms including Big Data and the cloud. Once on the new platforms, Teleran's solutions ensure business performance, compliance and cost efficiency.

For more information about Teleran Cloud-Readiness Assessment visit Teleran.com or call +1.973.439.1820.

Teleran's Application Cloud-Readiness Software automatically scores an application's readiness for migration to the cloud

### Ensuring Cloud Migration Success

Teleran's Cloud-Readiness Assessment identifies and sizes the effort to move applications to the cloud. Its detailed analysis of the use, business context and performance of applications provides a migration roadmap that enables a company to significantly reduce the time and cost to migrate applications to the cloud.

Because the Assessment provides a comprehensive picture of the application's characteristics, it reduces the risk of surprises or problems occurring during the migration that can slow the project or increase its costs. In addition, it ensures that the application, once deployed in the cloud, delivers the expected benefits to the business from day one.

### Quick, Fact-Based Assessment Process

As a Software as a Service, the Teleran Assessment solution is simple and unobtrusive to customer operations. The Assessment is typically a four week process and includes these four steps:

- Workshop Planning Session
- Software Agent Installation and Data Collection
- Analysis
- Findings and Recommendations

### Accelerating Cloud Migrations

Teleran's automated Cloud-Readiness Assessment replaces manual, time consuming and expensive assessment services. It brings transparency and accuracy to the assessment process that yields faster, more confident business-driven decisions and more successful cloud migrations.
