

Oracle Database Appliance Data Warehouse Solution

Improving Cost Efficiency, Performance, Compliance, and Business Value

RESULTS

Improved user performance and productivity

Minimized maintenance and support costs

Increased data warehouse value and service to the business users

Ensured HIPAA compliance

Insurer Data Warehouse Director

“The Oracle/Teleran Data Warehouse Solution enabled us to quickly deploy a high performance, cost efficient data warehouse to the business. Queries that ran in hours now run in minutes.

With the automated system maintenance and end-user management, our data warehouse staff can spend more time meeting business needs versus administering the system.”

Client: Healthcare Insurer

This large US healthcare insurer was seeking to streamline their IT processes, especially data warehousing to better support key business functions including finance, accounting, customer service, and cost containment.

Challenges

The insurer’s executive mandate was to:

- Reduce rising IT costs,
- Improve data warehouse performance and user productivity to increase customer service levels and the data warehouse business value,
- Gain control over sensitive customer medical information and HIPAA compliance risks.

Solution

The Oracle Database Appliance/Teleran Data Warehouse Solution was selected by the insurer as the go-forward data warehousing platform because it addressed all the executive mandates around cost control, better service and value to the business as well as protecting sensitive personal medical information and meeting ongoing HIPAA regulatory compliance requirements.

Results

With the Oracle Database Appliance (ODA) Teleran Data Warehouse Solution the insurer significantly lowered their support and maintenance costs leveraging ODA automation and Teleran’s real-time user management. Performance was improved significantly – queries now run in minutes that before had taken hours due to ODA built-in performance tuning and Teleran’s real-time query management and optimization. In addition, they were able to address

HIPAA compliance requirements with Teleran’s sensitive data audit and real-time redaction and protection controls.
