

# Oracle Database Appliance Data Warehouse Solution

Deliver More Business Value, Improve Performance,  
Reduce Infrastructure & Support Costs

## Today's Data Warehouse Challenges

Data warehouses and the analytical applications they support are increasingly business-critical, enabling organizations to increase profit, reduce costs, and grow revenue. Yet, data warehousing has its challenges: costly infrastructure, complex system patching, unpredictable user queries, constant performance tuning, data security and compliance challenges, and a lack of visibility on how the business is really using and getting value from the data warehouse.

## The Solution: Oracle/Teleran Data Warehouse Appliance

Oracle and Teleran now offer the Data Warehouse In-A-Box Solution. It integrates Oracle Database Appliance, and Oracle BI with Teleran's Data Warehouse Optimization and Protection Software. This unique package delivers lower infrastructure and management costs, rapid deployments, performance-tuned databases, automated patching, usage analytics, and real-time query optimization and data protection. Deliver more value to the business, improve end-user productivity, minimize costs and improve data security and compliance in one proven, integrated package.

## Why Customers Deploy Oracle/Teleran Solution

- Minimizes costs, risks, time to deploy and manage
- Automates infrastructure maintenance and end-user support
- Speeds performance and ensures user productivity
- Identifies, audits, and protects sensitive data

## Ensure Resource Efficiency, User Productivity & Business Benefits

- Delivers visibility on users, query, application and data usage activity
- Usage analysis maximizes query performance, efficiency, and ROI
- Automated user management optimizes queries, improving productivity and performance
- Auditing and real-time controls deliver data protection and compliance

## Reduce Deployment & Maintenance Cost, Time & Risk

- Integrated infrastructure speeds deployment and time to value
- Engineered appliance tuned for optimal Oracle DB performance
- Automated patching reduces maintenance costs and time
- Pre-tuned Oracle DB speeds data warehouse queries
- Capacity on-demand licensing ensures cost efficiency and ROI

## Maximize Data Warehouse Value to the Business

- Automated maintenance and support at system, DB, user, and app levels reduce costs and improve quality of service
- Frees IT and data warehouse staff to better understand and support business needs
- Ensures optimal data warehouse business impact, cost-efficiency, and ROI

"The Oracle Teleran Data Warehouse solution enabled us to quickly deploy a high performance, cost efficient data warehouse to the business. Queries that ran in hours now run in minutes. With the automated system maintenance and end-user management, our data warehouse staff can spend more time meeting business needs versus administering the system."  
- Data Warehouse Director, Healthcare Company
