Oracle Database Appliance Data and Analytics Solution

Deliver More Business Value, Improve Performance, Reduce Infrastructure & Support Costs

Today's Data and Analytics Challenges

Data and analytical applications are increasingly business-critical, enabling organizations to increase profit, reduce costs, and grow revenue. Yet, business intelligence, analytics, and data warehousing have challenges: costly infrastructure, complex system patching, unpredictable user queries, constant performance tuning, data security and compliance challenges, and a lack of visibility on how the business is really using and getting value from the data and analytics.

The Solution: Oracle/Teleran Data and Analytics Appliance

Oracle and Teleran offer a powerful Data and Analytics Solution. It integrates Oracle Database Appliance (ODA) with Teleran's Data and Analytics Optimization and Protection Software. This unique package delivers lower infrastructure and management costs, rapid deployments, performance-tuned databases, automated patching, usage analytics, and real-time query optimization and data protection.

Deliver more value to the business, improve end-user productivity, minimize costs and improve data security and compliance in one proven, integrated package.

Why Customers Deploy Oracle/Teleran Solution

- Minimizes costs, risks, time to deploy and manage

- Automates infrastructure maintenance and end-user support

- Speeds performance and ensures user productivity

- Identifies, audits, and protects sensitive data

Ensure Resource Efficiency, User Productivity & Business Benefits

- Delivers visibility on users, query, application and data usage activity

- Usage analysis maximizes query performance, efficiency, and ROI

- Automated user management optimizes queries, improving productivity and performance

- Auditing and real-time controls deliver data protection and compliance

Reduce Deployment & Maintenance Cost, Time & Risk

- Integrated infrastructure speeds deployment and time to value

- Engineered appliance tuned for optimal Oracle DB performance

- Automated patching reduces maintenance costs and time

- Pre-tuned Oracle DB speeds data warehouse queries

- Capacity on-demand licensing ensures cost efficiency and ROI

Maximize Data and Analytics Value to the Business

- Automated maintenance and support at system, DB, user, and app levels reduce costs and improve quality of service

- Frees data managsement and analytics staff to better understand and support business needs

- Ensures optimal data and analytics business impact, cost-efficiency, and ROI

Director Data and Analytics, Healthcare Company

"The Oracle Teleran Data and Analytics Solution enabled us to quickly deploy a high performance, cost efficient data warehouse to the business. Queries that ran in hours now run in minutes. With the automated system maintenance and end-user management, our IT staff can spend more time meeting business needs versus administering the system."
